PROFILE

Diploma III Computer Technology student at Institut Teknologi Del (semester V) with hands-on experience across web development, DevOps and cloud, and IoT. Builds web applications with JavaScript, React, Node.js, and Laravel; installed and automated a private OpenStack cloud, and works with Docker, Kubernetes (k3s), GitHub Actions, OpenTofu, Ansible, Prometheus, and Grafana; designed the end-to-end data architecture of a LoRa-based IoT water quality monitoring system as Project Manager & System Analyst. Portfolio: bram-modestus-naibaho.vercel.app. Open to internships in software development, DevOps, cloud, and system engineering.

TECHNICAL SKILLS

Languages	Python, JavaScript, PHP, Java, C++, Bash
Web & Backend	HTML5, CSS3, React, Node.js, Laravel, WordPress; REST APIs
Databases	MySQL, PostgreSQL, MongoDB, InfluxDB
Cloud & IaC	OpenStack (DevStack), OpenTofu, Ansible, VMware, cloud-init
Containers & CI/CD	Docker, Docker Compose, Kubernetes (k3s), GHCR, Git, GitHub, GitHub Actions
Monitoring & Security	Prometheus, node-exporter, Grafana; Gitleaks, Trivy; least privilege
Linux & Networking	Ubuntu Server, WSL2, systemd, netplan; Huawei HCIA-Datacom, Ethical Hacking
IoT & Practices	ESP32, LoRa, Raspberry Pi, MQTT; Agile, technical documentation

MAIN PROJECTS

LoRa Buoy-Based Lake Water Quality Monitoring System — Final Project (2025)

Project Manager & System Analyst · ESP32 · LoRa · Raspberry Pi 4 · MQTT · InfluxDB · Grafana

- Designed the end-to-end data architecture: ESP32 + LoRa on the buoy → Raspberry Pi 4 gateway → MQTT → InfluxDB time-series storage → real-time Grafana dashboard running locally.
- Validated the system in a 5+ hour in-water test: about 1–2 s display latency, plus hourly average, maximum, and minimum aggregation.
- Led a three-person team using Agile; managed schedule and budget, defined requirements, and wrote the full technical documentation.

DevSecOps CI/CD Pipeline to Kubernetes — Self-Directed Project (Nov 2026)

GitHub Actions · Gitleaks · Trivy · Docker · GHCR · Ansible · Kubernetes (k3s) · Prometheus · Grafana · OpenTofu ·
github.com/Bram-02/devops-website-bram

- Built a GitHub Actions pipeline where every git push passes three gates: secret scanning (Gitleaks), vulnerability scanning (Trivy), and a page test; the image is then pushed to GHCR tagged with the commit SHA.
- Deployed to Kubernetes (k3s) with an Ansible playbook, with one-command rollback to a previous version.
- Added monitoring with Prometheus and Grafana, and managed the infrastructure as code with OpenTofu.

DevOps & Cloud Practice Lab — Self-Directed Learning (Oct–Nov 2026)

OpenStack · Docker · Kubernetes (k3s) · OpenTofu · Ansible · GitHub Actions · Prometheus · Grafana · Trivy ·
github.com/Bram-02/latihan-devops

- Installed a private OpenStack 2026.1 cloud (DevStack) on an Ubuntu Server VM and deployed a website using cloud-init and a floating IP; automated network recovery after reboot with netplan, Bash, and systemd.
- Containerized the website with Docker and Compose, built a GitHub Actions CI pipeline, and applied Infrastructure as Code with OpenTofu and Ansible.
- Ran an application on Kubernetes (k3s) and built monitoring with Prometheus, node-exporter, and Grafana.
- Scanned with Gitleaks (0 leaks across 21 commits) and Trivy (HIGH/CRITICAL findings from 66 to 0); applied least privilege with non-root containers and a Kubernetes securityContext.

Second-Generation Multi-Sensor LoRa-Based IoT Buoy — Research (2026)

LoRa · GPS · DO, pH, TDS, Temperature & Turbidity Sensors · Solar Power · Cloud IoT Platform

- Contributing to the next generation: adds a Dissolved Oxygen sensor (five parameters), GPS, and a cloud-based IoT platform with automatic warning notifications; includes sensor calibration, LoRa range testing, and open-water trials.

Toba Ethnic Pizza Restaurant Website & Manalu Village Information System

WordPress · Elementor · MySQL · Apache · Team projects

- Developing a restaurant website with menu browsing and WhatsApp ordering, and a village information system (profile, potential, announcements, news, services) for Manalu Village, Humbang Hasundutan.

EDUCATION & ORGANIZATION

D-III Computer Technology — Institut Teknologi Del 2024 – Present

- **Active Member, HIMATEK** (Computer Technology Student Association), IT Del — takes part in work programs focused on developing members' technical skills.
- **IT Del Department of Arts and Culture** — helps organize student creative activities and programs that develop, preserve, and promote arts and culture.

CERTIFICATIONS & AWARDS

- **HCIA-Datacom V1.0** — Huawei ICT Academy
- **HCIA-Storage V5.0** — Huawei ICT Academy
- **Ethical Hacker** — Cisco Networking Academy
- **Introduction to Cyber Security** — Cisco Networking Academy
- **Data Analytics Essentials** — Cisco Networking Academy
- **Aguna Course** — Python, Linux, Network, and Virtual Machine Fundamentals
- **Gemastik** — Pusat Layanan Pembiayaan Pendidikan Kemendikbud Ristek
- **Web Design Competition** — PK-TECHSOFT / HIMA-RPL
